

Iván Kaleb Ramírez Torres

Full Stack Java Developer

+525567088820 | rtkaleb@gmail.com | Mexico City, Benito Juárez | LinkedIn: [Iván Kaleb Ramírez Torres](#) | GitHub: [rtkaleb](#) | Portfolio

PROFESSIONAL PROFILE

Bilingual Full Stack Java Developer with a PhD in Science and background in software architecture, QA, and backend development. Experienced in implementing and testing scalable systems in Java, JavaScript, REST APIs, JUnit, Jest, and Git under agile methodologies. Skilled in using AI and LLMs to automate workflows, technical content, and process optimization. Able to lead teams, deliver high-impact technical solutions, and communicate complex concepts in multidisciplinary environments.

TECHNICAL SKILLS

Java | Spring Boot | JavaScript | Node.js | Express | React | MongoDB | SQL | Git | REST APIs | Postman | Maven | Swagger | HTML | CSS | JUnit | Jest | JaCoCo | Python | C | Scrum | IntelliJ IDEA | VS Code | Vercel | MatLab | Mathematica | Mercury | R | Origin

SOFT SKILLS

Analytical thinking | Problem solving | Teamwork | Effective communication | Self-directed learning | Adaptability | Time management | Attention to detail | Leadership | Global perspective

ACADEMIC PROJECT

Frontend Developer | MercArt – E-commerce Web Platform (DEV.F Frontend with AI) (August – September 2025)

- Built functional and responsive user interfaces for an e-commerce platform, translating Figma designs into reusable components with React and JavaScript.
- Successfully connected the frontend to external services by consuming REST APIs, with continuous deployment on Vercel to keep the product always available.
- Coordinated iterative team deliveries applying Scrum methodology (backlog, sprints, and reviews), enabling the team to meet project deadlines with sustained quality.
- Maintained code integrity within a multidisciplinary team by managing branches, pull requests, and conflict resolution in Git/GitHub.

WORK EXPERIENCE

E-Commerce Web Application (Full Stack Developer) | Almiux (March 2026 – June 2026)

- Developed an e-commerce web application for the customization and sale of grocery products using HTML, CSS, Bootstrap, and JavaScript, implementing responsive interfaces, interactive components, and animations.
- Developed key features including a dynamic product catalog, user registration and login, shopping cart, and contact section.
- Managed project development under SCRUM methodology, using Jira for sprint planning and Git/GitHub for version control and team collaboration.

Backend Developer | TechnoReady – Full Stack / Software Quality Java Spring Boot (September 2025 – February 2026)

- Applied full-stack skills by building 4 functional end-to-end projects using Java, Spring Boot, JavaScript, HTML, CSS, and React, following best practices in architecture and documentation.
- Improved code coverage in test suites through systematic implementation of unit tests with JUnit and Jest, using JaCoCo for quality measurement and control.
- Delivered scalable and well-documented backend services by designing and exposing REST APIs with Java Spark, following naming and documentation standards that facilitate integration with other teams.
- Ensured code traceability and stability in a collaborative environment by managing Git/GitHub workflows with feature branches, pull request reviews, and structured conflict resolution.

Graduate Researcher | Institute of Materials Research – UNAM (August 2021 – December 2025)

- Generated replicable results in advanced materials projects by designing rigorous experimental protocols with characterization techniques and processing data with high-precision tools such as Matlab, Mathematica, and Mercury.
- Achieved international scientific visibility by publishing in high-impact peer-reviewed journals (Chemistry of Materials, Dalton Transactions) through iterative cycles of experimentation, critical analysis, and scientific writing in English.
- Fostered scientific collaborations with research groups in Mexico and Japan by coordinating schedules, intercultural communication, and joint deliverables in multidisciplinary environments.
- Communicated research results to specialized audiences as a speaker at national and international conferences (Polymat Huatulco 2020; conferences on gravitational waves and applied physics, 2014–2016).
- Chaired the Student Chapter, organizing outreach seminars and the National Congress of Materials Science Students, managing teams and maintaining communication with various academic institutions.

EDUCATION

- Jr. Full Stack Java Developer Bootcamp | Generation México (March 2026 – June 2026)
- PhD in Materials Science and Engineering | National Autonomous University of Mexico (August 2021 – February 2026)
- Bachelor's Degree in Mathematics | National Autonomous University of Mexico (August 2016 – July 2020)
- Bachelor's Degree in Technology | National Autonomous University of Mexico (August 2013 – December 2016)

COURSES

- Cisco Networking Academy – Python Essentials 1 & 2 (2026)
- Back End Developer Core In-México Program | Tecmilenio (2025)
- Master in AI-Assisted Frontend Development | DEV.F (2024–2025)

LANGUAGES

- English – C1
- French – DELF B1
- Japanese – N5
